Standardisation of a New Speech Processing Test in Swedish: The Listen-Say Test

Nakeva von Mentzer, C1,., Hua, H2,., Hällgren, M2,3 & Lyxell, B2. (2014).
1 Dpt of Neuroscience, Speech Language Pathology Program, Uppsala University
2 Swedish Institute of Disability Research, Linköping University
3 Department of Otorhinolaryngology/Section of Audiology, Linköping University Hospital, Linköping, Sweden
With support by Tysta skolan, Stockholm and Cochlear Nordic AB

OBJECTIVE
- Prepare and standardize the Listen-Say test – a new analytical speech processing test
- Investigate how typically developing children in first and second grade discriminate and identify consonantal contrasts in quiet and in babble noise.

MATERIAL & METHODS
- Pure Tone Average Screening (5 min)
- Listen-Say test (30 min) (Computer, Audiometer phones, USB-buttons)
- Lexical access (F, A, S and Animals)
- Questionnaires regarding reading, learning, interest

DESIGN

PARTICIPANTS
21 children 6-8 yrs (10 girls), n=7 (grade 1), n=14 (grade 2)
